

# SIGNALLING RECORD SOCIETY

## Index to SRS Newsletters 1 – 101 (1970 – 1986)

This is a subject index, not a title or name index. It does not include all references to standard or common equipment, nor are references given to equipment used solely in foreign countries for which details may be found in "Overseas" references. Likewise "Society News" of purely temporary interest, "Latest Signalling Alterations" and "For Sale" advertisements have been excluded. Items about particular locations are classified by pre-Grouping companies, including those relating solely to post-1923 installations or events.

The references generally are to issue and page number, thus 81-79 indicates page 79 of "Newsletter" No. 81.
