BR(E) Surplus Capacity files (Box 740)

Accession Number	Company	RailRef	Digitised	Reference	Date created	Last modified	Type	Description	Comments
<p>General note: The files in this collection were created by the York S&T Dept in 1968, apparently as part of a broader initiative to identify trackwork and signalling that was surplus to requirements, and to estimate the resulting costs and savings. Each file covers a single location or a section of line. The files generally contain locking sketches for the relevant boxes - sometimes locking tables as well. Some scheme plans are included for the simpler alterations, but where the proposal was to resignal an area, few details of the proposed new signalling are present.</p>
